Statistical Methods for Forecasting Bovas Abraham, Johannes Ledolter
The Wiley-Interscience Paperback Series consists of selected books that have been made more accessible to consumers in an effort to increase global appeal and general circulation. With these new unabridged softcover volumes, Wiley hopes to extend the lives of these works by making them available to future generations of statisticians, mathematicians, and scientists.

"This book, it must be said, lives up to the words on its advertising cover: 'Bridging the gap between introductory, descriptive approaches and highly advanced theoretical treatises, it provides a practical, intermediate level discussion of a variety of forecasting tools, and explains how they relate to one another, both in theory and practice.' It does just that!"
-Journal of the Royal Statistical Society

"A well-written work that deals with statistical methods and models that can be used to produce short-term forecasts, this book has wide-ranging applications. It could be used in the context of a study of regression, forecasting, and time series analysis by PhD students; or to support a concentration in quantitative methods for MBA students; or as a work in applied statistics for advanced undergraduates."
-Choice

Statistical Methods for Forecasting is a comprehensive, readable treatment of statistical methods and models used to produce short-term forecasts. The interconnections between the forecasting models and methods are thoroughly explained, and the gap between theory and practice is successfully bridged. Special topics are discussed, such as transfer function modeling; Kalman filtering; state space models; Bayesian forecasting; and methods for forecast evaluation, comparison, and control. The book provides time series, autocorrelation, and partial autocorrelation plots, as well as examples and exercises using real data. Statistical Methods for Forecasting serves as an outstanding textbook for advanced undergraduate and graduate courses in statistics, business, engineering, and the social sciences, as well as a working reference for professionals in business, industry, and government.

From reader reviews:

Robert Clift:

This book untitled Statistical Methods for Forecasting to be one of several books in which best seller in this year, that's because when you read this reserve you can get a lot of benefit upon it. You will easily to buy this particular book in the book retail store or you can order it through online. The publisher on this book sells the e-book too. It makes you more easily to read this book, as you can read this book in your Smart phone. So there is no reason to you personally to past this guide from your list.

Alberto Redden:

Reading a publication tends to be new life style on this era globalization. With looking at you can get a lot of information that may give you benefit in your life. With book everyone in this world could share their idea. Books can also inspire a lot of people. Plenty of author can inspire all their reader with their story as well as their experience. Not only situation that share in the books. But also they write about the information about something that you need example of this. How to get the good score toefl, or how to teach your sons or daughters, there are many kinds of book that exist now. The authors these days always try to improve their expertise in writing, they also doing some exploration before they write with their book. One of them is this Statistical Methods for Forecasting.

Lloyd Schuler:

Many people spending their time by playing outside using friends, fun activity using family or just watching TV all day long. You can have new activity to pay your whole day by reading a book. Ugh, ya think reading a book can actually hard because you have to bring the book everywhere? It fine you can have the e-book, taking everywhere you want in your Cell phone. Like Statistical Methods for Forecasting which is finding the e-book version. So , why not try out this book? Let's notice.

Jami Hannah:

What is your hobby? Have you heard in which question when you got students? We believe that that problem was given by teacher on their students. Many kinds of hobby, Every person has different hobby. And also you know that little person like reading or as reading become their hobby. You should know that reading is very important in addition to book as to be the factor. Book is important thing to provide you knowledge, except your own personal teacher or lecturer. You find good news or update in relation to something by book. A substantial number of sorts of books that can you go onto be your object. One of them is Statistical Methods for Forecasting.
