Comparative Climatology of Terrestrial Planets (Space Science Series)

Comparative Climatology of Terrestrial Planets (Space Science Series)

The early development of life, a fundamental question for humankind, requires the presence of a suitable planetary climate. Our understanding of how habitable planets come to be begins with the worlds closest to home. Venus, Earth, and Mars differ only modestly in their mass and distance from the Sun, yet their current climates could scarcely be more divergent. Only Earth has abundant liquid water, Venus has a runaway greenhouse, and evidence for life-supporting conditions on Mars points to a bygone era. In addition, an Earth-like hydrologic cycle has been revealed in a surprising place: Saturn's cloud-covered satellite Titan has liquid hydrocarbon rain, lakes, and river networks.

Deducing the initial conditions for these diverse worlds and unraveling how and why they diverged to their current climates is a challenge at the forefront of planetary science. Through the contributions of more than sixty leading experts in the field, *Comparative Climatology of Terrestrial Planets* sets forth the foundations for this emerging new science and brings the reader to the forefront of our current understanding of atmospheric formation and climate evolution. Particular emphasis is given to surface-atmosphere interactions, evolving stellar flux, mantle processes, photochemistry, and interactions with the interplanetary environment, all of which influence the climatology of terrestrial planets. From this cornerstone, both current professionals and most especially new students are brought to the threshold, enabling the next generation of new advances in our own solar system and beyond.

Contents

Part I: Foundations

Jim Hansen

Mark Bullock

Scot Rafkin

Caitlin Griffith

Shawn Domagal-Goldman and Antígona Segura

Kevin Zahnle

Part II: The Greenhouse Effect and Atmospheric Dynamics

Curt Covey

G. Schubert and J. Mitchell

Tim Dowling

Francois Forget and Sebastien Lebonnois

Vladimir Krasnopolsky

Adam Showman

Part III: Clouds, Hazes, and Precipitation

Larry Esposito

A. Määttänen, K. Pérot, F. Montmessin, and A. Hauchecorne

Nilton Renno

Zibi Turtle

Mark Marley

Part IV: Surface-Atmosphere Interactions

Colin Goldblatt

Teresa Segura et al.

John Grotzinger

Adrian Lenardic

D. A. Brain, F. Leblanc, J. G. Luhmann, T. E. Moore, and F. Tian

Part V: Solar Influences on Planetary Climate

Aaron Zent

Jerry Harder

F. Tian, E. Chassefiere, F. Leblanc, and D. Brain

David Des Marais

From reader reviews:

Joseph Curtis:

Do you one among people who can't read enjoyable if the sentence chained from the straightway, hold on guys this aren't like that. This Comparative Climatology of Terrestrial Planets (Space Science Series) book is readable by you who hate those perfect word style. You will find the facts here are arrange for enjoyable examining experience without leaving possibly decrease the knowledge that want to offer to you. The writer of Comparative Climatology of Terrestrial Planets (Space Science Series) content conveys the thought easily to understand by many individuals. The printed and e-book are not different in the content but it just different by means of it. So , do you still thinking Comparative Climatology of Terrestrial Planets (Space Science Series) is not loveable to be your top listing reading book?

Walter Jones:

Are you kind of hectic person, only have 10 or maybe 15 minute in your morning to upgrading your mind proficiency or thinking skill actually analytical thinking? Then you are receiving problem with the book compared to can satisfy your small amount of time to read it because pretty much everything time you only find guide that need more time to be examine. Comparative Climatology of Terrestrial Planets (Space Science Series) can be your answer mainly because it can be read by you who have those short extra time problems.

Roxie Jenkins:

The book untitled Comparative Climatology of Terrestrial Planets (Space Science Series) contain a lot of information on this. The writer explains your girlfriend idea with easy approach. The language is very straightforward all the people, so do definitely not worry, you can easy to read the item. The book was compiled by famous author. The author will take you in the new era of literary works. You can read this book because you can read on your smart phone, or product, so you can read the book in anywhere and anytime. In a situation you wish to purchase the e-book, you can start their official web-site and order it. Have a nice go through.

Kaye Hensley:

As we know that book is essential thing to add our information for everything. By a e-book we can know everything we wish. A book is a pair of written, printed, illustrated or maybe blank sheet. Every year was exactly added. This e-book Comparative Climatology of Terrestrial Planets (Space Science Series) was filled in relation to science. Spend your time to add your knowledge about your science competence. Some people has different feel when they reading the book. If you know how big benefit of a book, you can experience enjoy to read a e-book. In the modern era like now, many ways to get book you wanted.
