Build Your Own Kitchen Cabinets Danny Proulx

Cut Your installation Time in Half Save thousands of dollars by building your own custom kitchen cabinets ' it's easier than you think with an ingenious construction system devised by Danny Proulx, a lifelong professional cabinetmaker. Proulx's system combines the best parts of the faceframe cabinetconstruction system that's common in North America and the European frameless cabinet system developed after World War II. The result is a cabinet that's easy to build, easy to install, easy to clean and looks like a traditional wooden cabinet. As a bonus, this system is fast and doesn't require a lot of tools. A table saw and drill handle most of the chores. And once you get comfortable with the basics, you'll be able to construct a cabinet in just a few hours. Plus, after you build one simple base cabinet, you'll use the same methods to build every other cabinet in a kitchen: corner cabinets, overtherange cabinets, refrigerator surrounds, microwave cabinets, sink cabinets and even kitchen islands. When we first reviewed this book, we thought that surely there would be a lot of math to develop all the customized cutting lists needed for a kitchen. Boy were we wrong. Proulx has developed a series of charts that make all your cutting lists a piece of cake. First measure the room where the cabinets will go. Figure out how big each cabinet will be. Find that size on the chart and you'll see all your part sizes listed there. Set the fence on your table saw and go to town. Hardware is the Heart The system explained in Build Your Own Kitchen Cabinets is unique because it fully exploits the versatility of modern hardware to make things faster, stronger and better. Instead of building a separate base for each lower cabinet, Proulx plugs you into the world of adjustable feet. These gizmos take just a minute to install and take most of the headaches out of installing cabinets. In fact, these legs can still keep a run of kitchen cabinets perfectly in line even
