Guía para especificar e implementar software basado en componentes con la tecnología EJB (Spanish Edition) Omar S. Gómez

Debido al gran avance tecnológico que ha sufrido la informática, a día de hoy el desarrollo y mantenimiento de productos software se ha vuelto una actividad compleja. En la actualidad los ingenieros del software trabajan en el desarrollo y mantenimiento de productos que involucran cientos de miles de líneas de código. El desarrollo de software basado en componentes surge de la necesidad de mitigar o reducir la complejidad con la que se enfrentan día a día los ingenieros del software. Este paradigma se basa en la idea de desarrollar y mantener productos software a partir del ensamblaje de componentes reutilizables que pueden ser implementados en una misma, o distintas tecnologías. En esta obra se presenta una guía la cual pretende facilitar la especificación e implementación de componentes software utilizando la tecnología EJB (Enterprise JavaBeans). Esta guía puede servir como recurso didáctico complementario en asignaturas de pregrado o posgrado que aborden la temática del desarrollo de software basado en componentes. Para el profesional quien inicia en el desarrollo y mantenimiento de productos software bajo el enfoque basado en componentes, esta guía orienta al profesional en la especificación e implementación de componentes software siguiendo un enfoque disciplinado.
