## Handbook of Space Technology (Aerospace Series)

Twenty years since the first edition was published in the German language, and just over fifty years since the launch of the Earth's first ever artificial satellite Sputnik 1, this third edition of the Handbook of Space Technology presents in fully integrated colour a detailed insight into the fascinating world of space for the first time in the English language. Authored by over 70 leading experts from universities, research institutions and the space industry, this comprehensive handbook describes the processes and methodologies behind the development, construction, operation and utilization of space systems, presenting the profound changes that have occurred in recent years in the engineering, materials, processes and even politics associated with space technologies and utilization. The individual chapters are self-contained, enabling the reader to gain a quick and reliable overview of a selected field; an extensive reference and keyword list helps those who wish to deepen their understanding of individual topics. Featuring superb, full colour illustrations and photography throughout, this interdisciplinary reference contains practical, hands-on engineering and planning information that will be invaluable to those on a career path within space technology, or simply for those of us who'd like to know more about this fascinating industry. Main section headings include: Introduction (historical overview, space missions) Fundamentals (orbital mechanics, aerothermodynamics/reentry, space debris) Launch Vehicles (staged technologies, propulsion systems, launch infrastructure) Space Vehicle Subsystems (structure, energy supply, thermal controls, attitude control, communication) Aspects of Human Flight (man in space, life support systems, rendezvous and docking) Mission Operations (satellite operation, control center, ground station network) Utilization of Space (Earth observation, communication navigation, space astronomy, material sciences, space medicine, robotics) Configuration and Design of a Space Vehicle (mission concept, system concept, environmental simulation, system design, Galileo satellites) Management of Space Missions (project management, quality management, cost management, space law)

### From reader reviews:

#### **Christine Curnutt:**

Why don't make it to be your habit? Right now, try to ready your time to do the important action, like looking for your favorite publication and reading a publication. Beside you can solve your long lasting problem; you can add your knowledge by the e-book entitled Handbook of Space Technology (Aerospace Series). Try to stumble through book Handbook of Space Technology (Aerospace Series) as your friend. It means that it can to become your friend when you really feel alone and beside those of course make you smarter than ever. Yeah, it is very fortunated for you personally. The book makes you far more confidence because you can know every little thing by the book. So , we need to make new experience in addition to knowledge with this book.

#### **Roberto Senn:**

The guide with title Handbook of Space Technology (Aerospace Series) includes a lot of information that you can study it. You can get a lot of advantage after read this book. This book exist new know-how the information that exist in this book represented the condition of the world right now. That is important to yo7u to learn how the improvement of the world. This kind of book will bring you with new era of the the positive effect. You can read the e-book on the smart phone, so you can read this anywhere you want.

#### **Daniel Metz:**

The reason why? Because this Handbook of Space Technology (Aerospace Series) is an unordinary book that the inside of the e-book waiting for you to snap that but latter it will surprise you with the secret it inside. Reading this book close to it was fantastic author who all write the book in such incredible way makes the content interior easier to understand, entertaining method but still convey the meaning entirely. So , it is good for you because of not hesitating having this ever again or you going to regret it. This unique book will give you a lot of positive aspects than the other book possess such as help improving your expertise and your critical thinking approach. So , still want to hold up having that book? If I were being you I will go to the book store hurriedly.

#### **Rosemary Robinson:**

What is your hobby? Have you heard in which question when you got college students? We believe that that problem was given by teacher for their students. Many kinds of hobby, Every individual has different hobby. And also you know that little person just like reading or as studying become their hobby. You must know that reading is very important along with book as to be the thing. Book is important thing to increase you knowledge, except your current teacher or lecturer. You find good news or update regarding something by book. Different categories of books that can you choose to use be your object. One of them is niagra Handbook of Space Technology (Aerospace Series).
